

ATTENTION!

WHAT IS F.O.G.?

F.O.G stands for **Fats, Oils and Grease** and are the number one cause of sewer system blockages.

F.O.G sticks to the walls of your plumbing and the sewer system, building up over time. Eventually this leads to total plumbing blockages, resulting in sewer overflows.

WHERE DOES F.O.G. COME FROM?

Meats | Cooking Oils
Dairy Products | Sauces, Dressings and Marinades

F.O.G related overflows can result in property damage, environmental damage and civil penalties and fines.

Residents may be held liable for all damages and cleanup costs related to a resident caused sewer back-up.

DO...

POUR

Allow F.O.G. to cool. Pour any liquids into a sealable, disposable container and place in trash.

SCRAPE

Use a spatula or a similar utensil to scrape any solid F.O.G. and food particles into the trash.

DRY WIPE

Use a paper towel to dry wipe any remaining F.O.G. residue into the trash.

USE A SINK STRAINER

Use a sink strainer to catch any food particles that may be left on dishes or cookware and empty into trash.

DON'T...

To protect your plumbing and sewer system **ALL** F.O.G. and food scraps should be thrown in the trash, **NEVER** down the drain.

REMEMBER THE THREE P'S

The only things that belong down the drain are the three P's... PEE, POOP and (toilet) PAPER. Please do not use "Flushable Wipes" as they are not truly flushable; they are plugging our lift station pumps and could lead to a sewer overflow if we don't get them out of our sewer system. Please do your part to keep our sewer system working.
